API Keys

If you are a programmer using our API or curl you will need an API key. Every account gets at least one API key by default. If you are paying for StreamEngine you should be extra careful about not letting your API keys in the wrong hands. You can always delete and regenerate API keys when ever you need.   Select and copy the API key and save it for use with your code or curl commands.

1.) New Key - click here to get a new API key.
2.) Delete Key - click on the red x to delete the selected API key.

If you want to use our API you can visit our **API help** document.

Please keep in mind after the demo mode you will be responsible for all charges to your account charged to your API key, so keep it safe and regenerate it from time to time.

If you have any issues please contact our support team.
