Books > igolgi Cloud > Transcoding

Transcoding

The Transcoding page is where all of the magic happens. Users can drag and drop files, while power users can link up cloud data storage from (aws, google and oracle clouds), use templates, curl and or API calls to batch their high volume jobs.

Please Note: This page is a dynamic page which changes based on what has been selected, your page may look different. Choosing cloud resources, separating audio from video, adding multiple audio tracks and using video ladders adds more complexity to this page. Drag and drop, using temporary storage and video files with embedded audio reduces complexity.

Transcoding Page Overview

1.) Access other Pages, Home page and Log out

Access any page by clicking on it in the left menu.

2.) Blue Triangle

This page can be very advanced, generally start with the blue triangle pointed down and only expose the options you want to turn on. Once you get comfortable with this you can use more options by clicking the triangle to the up position.
